/Roy King/			
Supervisory Patent Examiner, Art Unit 1793			

Continuation of 11. does NOT place the application in condition for allowance because:

Claims 1 and 21 were rejected in the final Office action dated June 16, 2008.

In the remarks dated September 16, 2008, claim 1 was amended to incorporate dependent claim 21, which is now canceled.

Applicant asserts that independent claim 1 is now allowable over the prior art because the prior art of record (specifically, Hawley's, Webster's, and Higgins) teaches techniques that apply to general metalworking or general metallurgical engineering and is not applicable to primary references Thum & Lorenz and Housh.

The Examiner respectfully disagress. Applicant is reminded that one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. Specifically, the teachings of Hawley's, Webster's, Higgins, and Callister, Jr. would NOT be evaluated in a vacuum but rather in conjunction with the primary references of Thum & Lorenz and Housh. Additionally, the teachings of Callister, Jr. in particular are certainly relevant to magnesium alloys because the motivation to produce a fine-grained material is derived from the desire to impart greater strength to the alloy. In the instant case, it is desriable for screws to have high tensile strengths, for they are subjected to high tensile forces when keeping two or more pieces mechanically joined. Thus, it would clearly be within the scope of one of ordinary skill in the art to utilize the teachings of Hawley's, Webster's, Higgins, and Callister, Jr. in conjunction with the primary references by applying them to a specific metal or metal alloy of choice, such as magnesium or magnesium alloys, to obtain a metal with desired characteristics.
